How to save the configuration file from the Solwise SAR-60x ADSL Routers to a PC using a web browser.

SAR-600E

Open your browser
Type <http://192.168.1.1/> into the address bar
Click 'Tools'
Click 'Get Configuration'.

Please note that you will only be able to save a configuration of the router to a PC if you have first saved a configuration in the router.

When the options appear click on save then select a save location.
Use the save process to load a configuration file.

SAR605EH/SAR-600EW

Open your browser
Type <http://192.168.1.1/> into the address bar

Once in you then need to input your settings and make sure you save them in the router with the save settings option.

You then go to the Advanced option and then Get Configuration. The save option then appears again and you will need to confirm the save location again. Once done you can then when needed load your configuration.

SAR-600ER

Open your browser
Type <http://192.168.1.1/> into the address bar

The password and user name is 'Admin' (Case sensitive)

You will need to have a configuration to save.

Click on the System tab and then on the Update Gateway on the left hand side. Then you will see the Backup Configuration option Click on this then select the save location.
