

Remote access on the NET-WAS-WMA-208 Hotspot

NB You must use Internet Explorer for this.

1. Create a local user with a password in the hotspot.
2. From your remote location enter the WAN IP address of the hotspot in the form <https://xx.xx.xx.xx>. (This must be a public IP address). If you get a certificate warning either click on "continue to the site" or install the certificate.
3. Log in as the user you have created.
4. You will then be asked to download a .cab file, when downloaded a PPTP VPN connection will be established between your PC and the hotspot.
5. The hotspot will have issued you with an ip address in the range 192.168.6.x.
6. Open a new tab or browser window and enter the IP address 192.168.6.254, you will be presented with the login box.
7. Log in with the admin user and password.
