

# More wireless solutions from Solwise

ENGENIUS has launched its new 11n Draft 2.0 wireless networking hardware. This new hardware is said to offer up to six times the speed of the current wireless technology standard.

A new product line is going to use the new technology, and this includes the Wireless-N Gigabit Router, as well as 11n USB dongles and adapters. The router adopts advanced multi-input and multi-output technology, which allows customers to transmit multiple streams of data in a single wireless channel, and will also extend the network range.

The router also has the function to connect any wired-Ethernet

devices together, a 64/128-bit security encryption, and has an RRP of just £93.25.
